Engineering student in Computer Science, Artificial Intelligence and Trusted Systems at ENSA Fès, with a strong interest in **AI applied to cybersecurity**. Experienced in data systems, machine learning–based anomaly detection, and secure data management. Currently seeking a **PFA or research-oriented internship**.

PROFESSIONAL EXPERIENCE

Database Management Intern
Buzzmark – Digital Marketing Agency, Morocco 2024 – 2025

Designed and structured relational databases for marketing datasets. Performed data cleaning and normalization to improve consistency and reliability. Wrote and optimized SQL queries to support campaign analysis. Applied data security and confidentiality best practices in a professional environment.

EDUCATION

National School of Applied Sciences (ENSA), Fès
Engineering Degree – Computer Science, Artificial Intelligence and Trusted Systems 2022 – 2026

Relevant coursework: Data Structures and Algorithms, Database Systems (SQL, Oracle, PL/SQL), Machine Learning and Deep Learning, Cybersecurity, Cloud Computing and DevOps.

Faculty of Science and Technology (FST)
Preparatory Scientific Year – Mathematics and Computer Science 2021 – 2022

PROJECTS

Machine Learning–Based Anomaly Detection in Network Traffic
ENSA Fès

Preprocessed and analyzed network traffic data. Extracted relevant features from network flows. Applied machine learning techniques to detect abnormal and malicious behaviors. Evaluated detection performance for cybersecurity monitoring use cases.

Secure Oracle-Based Data Management System
ENSA Fès GitHub

Designed a secure relational database using Oracle with integrity constraints. Implemented advanced SQL queries and PL/SQL procedures. Built an interactive dashboard for operational monitoring. Focused on data consistency, reliability, and secure access.

Relational Data System for Transaction Monitoring
ENSA Fès GitHub

Designed a structured relational database to track transactions and entity states. Implemented SQL queries to monitor activity, availability, and anomalies in records. Focused on data integrity and consistency in a multi-entity system.

TECHNICAL SKILLS

Programming: Python, SQL, Object-Oriented Programming (OOP), Data Structures and Algorithms.
Artificial Intelligence & Machine Learning: Machine Learning, Deep Learning, Supervised and Unsupervised Learning, Feature Engineering, Model Training and Evaluation, Cross-validation, Hyperparameter Tuning, Scikit-learn, TensorFlow, anomaly detection.
Data & Analytics: Data Preprocessing, Data Cleaning, Exploratory Data Analysis (EDA), Pandas, NumPy, Statistical Analysis.
Cybersecurity: Network Traffic Analysis, Machine Learning–Based Threat Detection, Anomaly Detection Systems, Secure Data Handling, Data Privacy and Security Principles.
Databases: Oracle, SQL, PL/SQL, Relational Database Design, Data Integrity Constraints, Query Optimization.
Cloud & DevOps: AWS (EC2, S3, IAM, Lambda), Docker, REST API fundamentals, Basic understanding of Cloud Deployment and System Architecture.
Version Control & Tools: Git, GitHub, Linux environment.

LANGUAGES

Arabic (native), French (fluent), English (professional working proficiency).

INTERESTS

AI for cybersecurity, machine learning–based threat detection, secure and trustworthy AI systems.
